Project: Custom Tank

Client: Reiner Earthmoving

Completed: July 08

Details:

Fabrication of custom made Oil Storage Tank

This tank was made to customer specifications. The customer required a tank that would fit into a standard size trailer. Specialised pump fittings and breathers allow for cleaner output along with inspection hatches to allow a visual inspections. The tank was designed with the environment in mind allowing clean oil storage as well as the storage of old oil to be disposed of at a later time. Lifting lugs were also attached to the tank to allow it to be lifted out of the trailer with greater ease.
